Karl-Heinz Best

was born on January 28, 1943 in Koblenz, Germany. He studied general linguistics and German linguistics at the University of Bonn (1964 - 1966), then in Bochum (1966 -1971) where he extended his study to Scandinavian languages. In Bochum he wrote his PhD thesis on analogy. From 1974 he taught at the University of Göttingen.

There are many important aspects of Best's scientific life. The first is the application of quantitative methods to writing, morphology, lexicon, syntax, language learning, language change, borrowing, language comprehension and history of quantitative linguistics. His main research field is German and Northern Germanic languages. His immortal merit is the testing of candidates for language laws on an enormous amount of data. The data were either collected by him from modern texts or found by him on places where nobody had ever sought them: in the history of German linguistics. In this way he has shown that German linguists were always interested in the quantitative evaluation of linguistic data. The 26 historiographic articles in his bibliography were published mostly in the journal *Glottometrics*, which enjoys his membership in the editorial board. Best's biographies bring to light the fact that linguistics was not that qualitative as presented in books about its history. There were ideas and works which were simply ignored because of the weight of other paradigms such as the neogrammarians and structuralism. The same was the fate of G.K. Zipf, whose philosophy passed almost unnoticed along the army of structural and generative linguists, who were sure to have discovered the "truth". Today, the traces of Zipf's work can be found in every scientific discipline, his hypotheses form the basis of frequentism and synergetic linguistics. Karl-Heinz Best detected the son of the famous physician S.V. Čebanov, who introduced the Poisson process into linguistics and wrote a historical note about his father together with him.

The second important activity of K.H. Best is the propagation of quantitative linguistics on the Internet. There are hundreds of articles written by him about different issues both in qualitative and quantitative linguistics. Not everybody is ready or takes the time to write popular articles in Wikipedia or Wiktionary but K.H. Best does it with relentless enthusiasm. In linguistic circles one says that the information about linguistics which can be obtained on the Internet is the "Best" one.

The third aspect is Best's editorial activity. This is not restricted to his membership in the editorial boards of *Glottology*, *Glottometrics* and *Göttinger Beiträge zur Sprachwissenschaft*, where he cannot impel the colleagues directly but he edits also omnibus volumes where he can play the role of a slave driver. His volumes are always ready on time and concern both synchronic and diachronic linguistics, everything nicely wrapped in a quantitative dress.

K.-H. Best cooperates at the conferences on *Knowledge transfer* in Göttingen and Halle.

Since we all begin to be active somewhere at the university and know how difficult it is to persuade colleagues and students that exact linguistics striving for theories is perhaps more advanced than concept coining, classifications and rule description, we cannot sufficiently emphasize the enormous success with which K.-H. Best won both students and colleagues for quantitative linguistics. Under normal circumstances one needs a Smith & Wesson, calibre 8 mm, to persuade a linguist that there are many ways to truth (not only generative linguistics) but mostly not even a revolver helps. But K.-H. Best succeeded without bodily violence and both his students and his colleagues published a number of articles (see References) which would fill several thick volumes. He called his collection *Göttinger Projekt Quantitative Linguistik* which can be found also on the Internet. Göttingen was one of the few German universities accepting quantitative analyses as bachelor, master or doctoral theses. His own work comprises more than 140 articles and more than 100 book reviews in the journal *Germanistik*.

Issues in Quantitative Linguistics Vol. 3
(= Studies in Quantitative Linguistics No. 13)
Contents

Karl-Heinz Best	3
Bibliography of K.-H. Best	5
Bibliography of the Göttingen Project (Pupils)	16
Gabriel Altmann	
Aspects of word length	23
Lu Wang	
Word length in Chinese	39
Emmerich Kelih	
Bemerkungen zur Wissenschaftsgeschichte der quantitativen Linguistik: Baudouin de Courtenay und Hugo Schuchardt	54
Peter Grzybek	
Homogeneity and heterogeneity within language(s) and text(s): Theory and practice of word length modelling	66
Kamil Stachowski	
The influx rate of Turkic glosses in Hungarian and Polish post-mediaeval texts	100
Peter Zörnig	
Distances between words of equal length in a text	117
Irma Sorvali	
Ecotranslatorology	130
Fan Fengxiang, Yu Yang, Wang Hua	
Subjectival position and syntactic complexity in English sentences	137
Relja Vulcanović	
Efficiency of Word Order in Flexible Parts-of-Speech Systems	150
Veronika Vincze	
The relationship of dependency relations and parts of speech in Hungarian	168

Olexandra Nuzban, Sergej Kantemir	
Statistical analysis of perception adjectives ‘soft’ – ‘hard’ in English	177
Andrei Beliankou, Reinhard Köhler, Sven Naumann	
Distribution of the depth of argumentation relations	195
George K. Mikros	
Systematic stylometric differences in men and women authors: a corpus-based study	206
Ioan-Iovitz Popescu, Sven Naumann, Emmerich Kelih, Andrij Rovenchak, Anja Overbeck, Haruko Sanada, Reginald Smith, Radek Čech, Panchanan Mohanty, Andrew Wilson, Gabriel Altmann	
Word length: aspects and languages	224
Ján Mačutek, Gejza Wimmer	
Alternative methods of goodness-of-fit evaluation applied to word length data	282
Gordana Đuraš, Ernst Stadlober, Emmerich Kelih, Peter Grzybek	
Komplexität sprachlicher Formen: Die Singh-Poisson-Verteilung: ein Modell in der Wortlängenforschung?	291
Bahar Karaođlan, Bekir Taner Dinçer, Tarık Kışla, Senem Kumova Metin	
Language and corpus independent performance metric for language models	309
Sigurd Wichter	
Wie kommuniziert eine Gesellschaft aus linguistischer Sicht?	326
Petra Claudia Steiner	
Diversification of English valency patterns	369
Tim Duwaerts, Gereon Ullmann	
Quantitative Untersuchungen zur Valenz deutscher Substantive	392
