Preface

The third volume of *Problems* has the same structure and the same aim as the first two volumes. The problems can be used for writing essays for final examinations, dissertations or, in European context, “habilitations”. The authors would be very pleased if solutions to some problems would be published in some appropriate journals. They also hope that each problem presented here will be developed further both in empirical and theoretical directions. In many cases only suggestions and hints are given but the authors hope that the reader will go his own way and systematize the given problem, i.e. subsume it under a more general problem, link it with other phenomena and, at last, propose a theoretical derivation with linguistic substantiation. However, even empirical testing using other texts/languages and empirical generalizations would be of great value.

Each problem automatically evokes other problems which are either collateral or hierarchic, i.e. concern problems at the same linguistic level or at a different one. As a matter of fact, local problems can be solved in isolation adequately or ad hoc, but in theoretical research the only criterion of prolific solution is systematization. Hence we recommend the reader not to stop at the solution of a problem for a single text or text sort or author or language but to extend the analysis at least by means of empirical generalization to different objects. Since the readers are linguists, the extension of the scope of study to other languages may not be a serious problem.

In the present volume the problems are classified into six groups: phonology and script, grammar, semantics, synergetics, text analysis and a group of mixed problems. If there is a hint to a similar problem in the previous volumes, it is recommended to solve first the simpler task and generalize the problem step by step.

The mathematics necessary for solutions is simple and can either be found in text-books of statistics, or, if not, then the reader finds instructions directly in the “Procedure” accompanying each problem. It is recommended to read at least some of the works given in the References. Many times we quote old works in order to show that the problem itself is nothing new but obtains a different look in its new quantitative costume.

Acknowledgments

We are obliged to Fengxiang Fan and Eric Wheeler who read the book and helped us to improve our style. Radek Čech was supported by the Czech Science Foundation, grant no. P406/11/0268.

Contents

Preface 1

1. Phonology and script 1
1.1. Phoneme distribution: structural gaps 1
1.2. Stress placement in isosyllabic poems 3
1.3. Vowel duration 5
1.4. Homophones 6
1.5. Phonetic difference and frequency 8
1.6. Script motifs 12
1.7. Formal problems of rongorongo 14
1.8. Symbol frequencies 15

2. Grammar 25
2.1. Word form diversification
2.2. Diversification of case in Finnish 26
2.3. Inflection and derivation 28
2.4. Transitivity 29
2.5. Morph length 31
2.6. Distribution of morphological features 33
2.7. Paradigmatic expansion of words 34
2.8. Morpheme dynamics 35
2.9. Cohesion of compounds 37
2.10. Symmetry of sentence structure 38
2.11. Transitivity as a text parameter 40
2.12. Transitivity and text deployment 44
2.13. Transitivity and verb 45
2.14. Transitivity and children development 46
2.15. Transitivity and aspect 47
2.16. The distribution of full valency frames 49
2.17. Syntactic network analysis: hub/authority weight versus degrees 52
2.18. Syntactic network analysis: hub/authority weight as a text parameter 53
2.19. Proper names as a high Transitivity feature 54
2.20. Proper names and aspect of verbs 58

3. Semantics 61
3.1. Yesypenko’s linguistic world view 61
3.2. Polysemy and synonymy 62
3.3. The role of synonymy in self-regulation 64
3.4. Distribution of semantic roles and frames (corpus) 66
3.5. Verb classes
4. Synergetics
4.1. Arens’ law
4.2. Frequency and polytexty
4.3. Frequency and noun generality
4.4. Increase of word length
4.5. Text length vs. word length
4.6. Word length and phoneme inventory
4.7. Word length distributions
4.8. Full valency and the frequency of verbs
4.9. Full valency and the length of verbs
4.10. Full valency and polysemy
4.11. Full valency and synonymy
4.12. Full valency and compounding
4.13. Full valency and derivation
4.14. Full valency and Menzerath’s law
4.15. Syntactic network analysis
4.16. Typology
5. Text analysis
5.1. Text development
5.2. Cumulative text development
5.3. Experiments with arc length
5.4. The binary syntactic code of sentence
5.5. The binary code of text
5.6. The development of writer’s view
5.7. Hřebíček’s hypothesis
5.8. Chaining and distances
5.9. Sonnet 1
5.10. Sonnet 2
5.11. Text activity 1
5.12. Text activity 2
5.13. Assonance
5.14. Frequency and position of words in sentence
5.15. Word length and position in sentence
5.16. Development of rhyme
5.17. Vowel auto-affinity in poems
5.18. The lambda indicator and Ord’s criterion
5.19. The lambda-indicator and Busemann’s adjective-verb ratio
5.20. Sentence length in discourse
5.21. Sentence length sequences in discourse
5.22. Properties of illocutive graphs  
5.23. The frequency sequence of words in text  
5.24. Frequency motifs in text  
5.25. Thematic concentration  
5.26. Dialog: thematic concentration of participants  
5.27. Text compactness  
5.28. Frequency indicator A  
5.29. A vocabulary richness indicator  
5.30. Vocabulary richness and lambda-structure  
5.31. Gini’s coefficient and vocabulary richness  
5.32. Vocabulary richness project  
5.33. A textological project  
5.34. Text diffusity  
5.35. Aggregation in poetry  

6. Different issues  
6.1. Rank-frequency distribution of classifications  
6.2. Ranking and classification of verbs  
6.3. Sentence length development in German  
6.4. Verb development  
6.5. History  
6.6. Psychoanalytic word categories  
6.7. Language of children  
6.8. Vocalic language
