Glottometrics

Glottometrics ist eine unregelmäßig erscheinende Zeitschrift (2-3 Ausgaben pro Jahr) für die quantitative Erforschung von Sprache und Text.

Beiträge in Deutsch oder Englisch sollten an einen der Herausgeber in einem gängigen Textverarbeitungssystem (vorrangig WORD) geschickt werden.

Glottometrics kann aus dem **Internet** heruntergeladen werden (**Open Access**), auf **CD-ROM** (PDF-Format) oder als **Druckversion** bestellt werden.

Glottometrics is a scientific journal for the quantitative research on language and text published at irregular intervals (2-3 times a year).

Contributions in English or German written with a common text processing system (preferably WORD) should be sent to one of the editors.

Glottometrics can be downloaded from the **Internet (Open Access)**, obtained on **CD-ROM** (as PDF-file) or in form of **printed copies**.

Zum Problem der Entstehung des syllabotonischen Versmaßsystems
im europäischen Vers

1-22

Abstract. The present study is dedicated to the problem of the rise of the syllabotonic verse in early modern European poetry. It is part of the research on regularities in the genesis of a common versification system (the syllabotonics) within the poetry of different European nations. Here we investigate the rhythmic features of the German iambic tetrameter in the time of its emergence and early development. We compare some specifics of the German iambus with those of Dutch and later Russian verse. The investigation is performed using quantitative metrical methods. The result yields a picture of the development of the German verse in the years 1620 to 1720.

Popescu, Ioan-Iovitz; Altmann, Gabriel

Some aspects of word frequencies

23-46

Abstract. In the present article some new aspects of word frequency distributions are presented, namely the h-point, the k-point, the m-point, the n-point, the Lorenz curve and Gini's coefficient, all of which characterise some properties of texts. Their relationship to the measurement of vocabulary richness is scrutinized. It is an attempt at transferring some views from other domains of science to linguistics.

Best, Karl-Heinz

Wie viele Morphe enthalten Wörter in deutschen Presstexten?

47-58

Abstract. The paper presents word length data in German press texts with word length being based on the number of morphs. It can be shown that they follow the positive Cohen-negative binomial distribution (cf. Wimmer & Altmann 1999). In addition an excursus deals with the relation of the number of morphs and syllables in words.

Kiyko, Svitlana

Wortlängen im Gotischen

59-65

Abstract. The aim of this paper is to show that word lengths in Gothic texts follow the 1-displaced hyper-Poisson distribution; in the lexicon they abide by the Conway-Maxwell-Poisson distribution.

Best, Karl-Heinz

Deutsche Entlehnungen im Englischen

66-72

Abstract. The paper deals with two topics: The process of borrowing of German words in English and the spectrum of fields. Our aim is to show that the borrowings abide by the logistic law and the spectrum of fields follows a regular rank-frequency distribution.
