Glottometrics

Glottometrics ist eine unregelmäßig erscheinende Zeitschrift (2-3 Ausgaben pro Jahr) für die quantitative Erforschung von Sprache und Text.

Beiträge in Deutsch oder Englisch sollten an einen der Herausgeber in einem gängigen Textverarbeitungssystem (vorrangig WORD) geschickt werden.

Glottometrics kann aus dem **Internet** heruntergeladen werden (**Open Access**), auf **CD-ROM** (PDF-Format) oder als **Druckversion** bestellt werden.

Glottometrics is a scientific journal for the quantitative research on language and text published at irregular intervals (2-3 times a year).

Contributions in English or German written with a common text processing system (preferably WORD) should be sent to one of the editors.

Glottometrics can be downloaded from the **Internet (Open Access)**, obtained on **CD-ROM** (as PDF-file) or in form of **printed copies**.

Contents of Glottometrics 22, 2011 (including Abstracts)

Karl-Heinz Best

Diversification of a single sign of the Danube script 1-4

Abstract. In this paper the positive binomial distribution has been fitted to the ranked distribution of variations of a character of the Danube script. It brings a further corroboration of the hypothesis that diversification processes abide by laws.

Radek Čech, Ioan-Iovitz Popescu, Gabriel Altmann

Euphony in Slovak poetry 5-16

Abstract. Using a special expression, the value of euphony of individual sounds and whole poems in texts by the Slovak poetess E. Bachletová is scrutinized. The method allows to study also the significance of alliteration.

Vadim Baevskii

Academician Andrey Nikolaevich Kolmogorov
as a Scholar of Verse Theory 17-43

Abstract. The life of the great Russian mathematician Kolmogorov and his impact on the study of verse, especially rhythm, is described in this paper. The author is not only the follower of Kolmogorov but was also his personal acquaintance.

Radek Čech, Ioan-Iovitz Popescu, Gabriel Altmann

Word length in Slovak poetry 44-56

Abstract. In the present article the place of word-length in Slovak poetry in the framework of the general theory is sought. Different models are presented. The possibility of applying Menzerath's law in this domain is scrutinized.

Karl-Heinz Best

Word length distribution in French 57-61

Abstract. The present paper deals with word length in French letters and is part of the Göttingen *Projekt Quantitative Linguistik*. According to the examinations the *Hirata-Poisson*

distribution yields good results. Hence the paper yields a further corroboration of the hypothesis that word length distributions abide by laws.

Ioan-Iovitz Popescu, Radek Čech, Gabriel Altmann

Vocabulary richness in Slovak poetry

62-72

Abstract. This article examines different indicators of text properties – such as entropy, repeat rate, and arc length – and their distribution. All of these can be described as indicators of the vocabulary richness of the texts, as there is a very strict linear relationship between them.

Lu Wang

Polysemy and word length in Chinese

73-84

Abstract. This paper investigates the distribution of polysemy and the relationship between polysemy and word length in Chinese. The results show that polysemy in Chinese abides by the Zipf-Mandelbrot law; word length is, in accordance with other studies, a function of polysemy and vice versa.
