# Glottometrics

**Glottometrics** ist eine unregelmäßig erscheinende Zeitschrift (2-3 Ausgaben pro Jahr) für die quantitative Erforschung von Sprache und Text.

**Beiträge** in Deutsch oder Englisch sollten an einen der Herausgeber in einem gängigen Textverarbeitungssystem (vorrangig WORD) geschickt werden.

Glottometrics kann aus dem **Internet** heruntergeladen werden (**Open Access**), auf **CD-ROM** (PDF-Format) oder als **Druckversion** bestellt werden.

**Glottometrics** is a scientific journal for the quantitative research on language and text published at irregular intervals (2-3 times a year).

**Contributions** in English or German written with a common text processing system (preferably WORD) should be sent to one of the editors.

Glottometrics can be downloaded from the **Internet (Open Access)**, obtained on **CD-ROM** (as PDF-file) or in form of **printed copies**.

## Herausgeber – Editors

<b>G. Altmann</b>	Univ. Bochum (Germany)	02351973070-0001@t-online.de
<b>K.-H. Best</b>	Univ. Göttingen (Germany)	kbest@gwdg.de
<b>L. Hřebíček</b>	Akad .d. W. Prag (Czech Republik)	ludek.hrebicek@seznam.cz
<b>R. Köhler</b>	Univ. Trier (Germany)	koehler@uni-trier.de
<b>O. Rottmann</b>	Univ. Bochum (Germany)	otto.rottmann@t-online.de
<b>G. Wimmer</b>	Univ. Bratislava (Slovakia)	wimmer@mat.savba.sk
<b>A. Ziegler</b>	Univ. Graz Austria)	Arne.ziegler@uni-graz.at

**Bestellungen** der CD-ROM oder der gedruckten Form sind zu richten an

**Orders** for CD-ROM or printed copies to RAM-Verlag [RAM-Verlag@t-online.de](mailto:RAM-Verlag@t-online.de)

## **Uhlířová, Ludmila**

The case of Czech possessive adjectives and their head nouns:  
some distributional properties

1

**Abstract.** If a word class is defined on the basis of its co-occurrence with another word class in texts, then its ranking distribution may be well modelled by the negative hypergeometric probability distribution, and the interaction of the two classes can be described by the same type of model as well as with the help of some similar procedures, such as the non-linear regression. Those properties are demonstrated on possessive adjectives and their head nouns in a Czech corpus.

## **Best, Karl-Heinz**

Der Zuwachs der Wörter auf *-ical* im Deutschen

11

**Abstract.** Beginning from 1955 the number of words ending with *-ical* increases in German. It is shown that this process abides by the Piotrowski law.

## **Hřebíček, Luděk**

The elements of symmetry in text structures

17

**Abstract.** The present paper refers to general text theory which is based on Menzerath-Altman's law. This law defines the mutual relations of the language levels inside a given text. They have important semantic consequences. The structure is observed from the viewpoint of possible changes (transformations, movements) in the treatment of the structural relations. We want to know what is invariant when the changes are applied. This approach follows the classical work on symmetry by Hermann Weyl (1952/1968).

## **Lehfeldt, Werner, Altmann, Gabriel**

Der altrussische Jerwandel

34

**Abstract.** The article shows that the fall of the reduced vowels (*ь, ъ*) in weak position in Old Russian is the consequence of a process controlled by Menzerath's law holding for the relation between construct (phonetic word) and constituent (syllable). The process reduces excess redundancy.

## **Andersen, Simone**

Freedom of choice and the psychological interpretation of word frequencies

45

**Abstract.** To what extent are word frequencies in texts manipulable by text producers? The expected word frequency is regarded as a conditioned probability. This allows showing that observed frequencies are only partly frequencies of choice. When comparing frequencies, confounding with frequency of conditions, here called occasions, has to be avoided. The amount of free choice is discussed

### Subjektive Bewertung von Vorkommenshäufigkeiten: Methode und Ergebnisse

53

**Abstract.** Word frequency effects play an important role in speech production and perception as well as in language change processes. In most cases, frequency data is counted from text corpora. After discussing some results of the traditional procedure, the paper presents an alternative method of gathering subjective frequency data. This method was developed by R. Frumkina and her colleagues in the 1960s - 1970s. It is directed to the so-called "frequency index" that is assumed to treat frequency data from input and output and store it with the lexical representations in the individual's internal lexicon. The paper describes the experimental procedure and the underlying statistical methods and illustrates them on the basis of two experiments conducted with German words. Their outcome - two word frequency lists comprising 642 and 144 words resp. - is published according frequency as well as in alphabetic order.

## **Körner, Helle**

### Der Zuwachs der Wörter im Deutschen auf *-ion*

82

**Abstract.** It will be shown that in German the number of words ending with *-ion* increases in accordance with the Piotrowski law.

## **Rottmann, Otto**

### Syllable lengths in Russian, Bulgarian, Old Church Slavonic and Slovene

87

**Abstract.** This paper presents empirical syllable length data (with "syllable length" being based on the number of phonemes) from Slovene, modern Bulgarian, Old Church Slavonic (= Old Bulgarian) and modern Russian. The data analysed give evidence of the following adequate models: Hyperpoisson in Old Church Slavonic, modern Bulgarian and Slovene and Conway-Maxwell-Poisson or Morse in modern Russian.
